JULIO NICACIO

GAME AI PROGRAMMER | UNREAL | C++

 São José dos Campos/SP - Brazil

PROFILE

Been in game development since 2021, working across gameplay systems, multiplayer, and console porting. After a few years as a generalist Unreal developer leading teams and shipping multi-platform titles, I moved into AI programming where I build intelligent agent behaviors that create meaningful gameplay challenges and interactions.

Day to day I'm writing AI behaviors in C++, prototyping quickly to test ideas, and working with directors to nail the feel we're after. I build both the individual behaviors and the systems that support them, extending Unreal's AI tools where needed.

Check my portfolio [HERE](#)

FORMATION

Universidade Tecnológica Federal do Paraná, Bachelor in **Computer Science**, 2018 - 2022

Descomplica, Technologist in **Digital Games**, 2022 - 2024

LANGUAGES

Fluent English
Native Portuguese
Learning Japanese

SKILLS

- **Languages:** C++, Python, C#, GDScript, Lua and Javascript
- **Game Engine:** Unreal Engine (C++ & Blueprints), Unity, Godot and Love2D
- **Multiplayer & Online:** Gameplay Ability System (GAS), EOS, Vivox, Playfab, AWS, Azure, Steam, Discord API
- **Tools & Workflow:** Git, Jira, Confluence, UML, Unreal Insights, Custom Tools, Unreal Source, PlasticSCM, Subversion, TeamCity, Perforce
- **Skills:** AI Programming, Multiplayer, Combat Design, Performance Optimization, Rapid Prototyping, Data-Driven Architecture

LATEST EXPERIENCES

Affray Interactive, Game AI Programmer

DECEMBER 2025 - CURRENTLY

- Designing and build intelligent agent behaviors that create meaningful gameplay challenges and interactions. using C++ and Unreal AI Tools
- Rapidly prototyping AI behaviors and building custom AI systems to support unique entity patterns

MNSTR Studio, Lead Game Programmer

MAY 2024 - NOVEMBER 2025

- Oversaw console porting (PlayStation, Xbox, Switch, PC) and cross-platform compliance
- Mentored junior Unreal developers and reviewed C++/Blueprint implementations
- Built the system's architecture and features using SOLID, RAIL, Move Semantics, Data-driven, Smart Pointers and Multithreading

Main Leaf Games, Game Programmer

AUGUST 2023 - MAY 2024

- Integrated EOS for multiplayer sessions and Vivox for real-time voice chat
- Refactored gameplay systems for scalability and latency-resilient multiplayer
- Supported cross-team communication between internal devs and external API partners

Animus Game Studio, Game Programmer

JUNE 2022 - JULY 2023

- Delivered online and local gameplay mechanics in Unreal using C++ and Blueprints of games for PC, Consoles and Mobile
